

# Steelcase Series® 1

AMERICAS, APAC

# About this product

Steelcase Series® 1 gives you essential ergonomics and quality at a great value. This high-performance chair boasts space efficiency and weight-activated controls. It retains everything that's valued in a chair, while making it attainable for everyone.

One chair is required to meet the functional unit of seating for one individual for a 10-year period.

Date of Issue: December 20, 2024 Date of Expiration: December 20, 2029

# About this document

This declaration describes the Life Cycle Assessment of the Series 1 office chair produced for the Americas and APAC markets by Steelcase Inc. in Mexico, China, and India. The assessment is performed according to the ISO standards 14040 (2006), 14044 (2006) and 14025 (2006) and BIFMA PCR for Seating: UNCPC 3811 (2020) to generate an EPD for business-to-business communication.

# **ASSESSMENT OVERVIEW**

EPD commissioner	Steelcase® Inc
Corporate Address	901 44th Street SE Grand Rapids, Michigan 49508-7594 United States
Product group	Seating
Product name	Series 1
Product intended use	Office chair
Product reference service life	10 years
Reference standards	ISO 14025, ISO 14040, ISO 14044
EPD scope	Cradle to grave
EPD number	EPD11016
Date of issuance	December 20, 2024
Date of expiration	December 20, 2029
EPD type	Product specific
EPD Product Coverage	Series 1 for the Americas and APAC markets
Intended audience	Business to business (B2B)
Year of reported manufacturer data	2023
Functional unit	One unit of seating to seat one individual for a reference service life of 10 years
Applicable markets/regions	Americas, APAC
LCA software and database version	GaBi 10.6.2.9; GaBi database, 2022.2
LCIA methodology and version number	TRACI 2.1
Program administrator	NSF Certification LLC 789 N. Dixboro, Ann Arbor, MI 48105 www.nsf.org
Reference PCR and version number	BIFMA PCR for Seating: UNCPC 3811 (BIFMA PCR, 2020)
PCR reviewer	Review Panel Chaired by Dr. Thomas Gloria
EPD reviewer	External review conducted by:
	Jim Mellentine, Thrive ESG This declaration and its Life Cycle Assessment was independently verified in accordance with ISO standards 14040 (2006), 14044 (2006), 14025 (2006), and BIFMA PCR for Seating UNCPC 3811 (2020).
LCA reviewer	External review conducted by:  Jack Geibig, <u>igeibig@ecoform.com</u> The product Life Cycle Assessment was conducted in accordance with ISO 14044 and the reference PCR.
Disclaimer	The PCR this EPD was based on was written to determine the potential environmental impacts of a seating product from cradle to grave. It was not written to support comparative assertions. EPDs

#### ASSESSMENT PARAMETERS

#### **Functional unit**

One unit of seating to seat one individual for a reference service life of 10 years. One product is required to fulfill the functional unit.

# **Product scope**

One Series 1 chair, produced in the Americas (product number 435A00), with 4D, height-adjustable arms and a plastic base was modeled for this EPD. This office chair is determined to be a typical product based on sales of the variations. The results presented for this configuration represent a baseline for the product.

#### Assessment goal and scope

The potential environmental impacts of Series 1 and its packaging throughout its entire life cycle — including raw materials extraction, production, transport, use, and end of life — were assessed. In the absence of primary information, the GaBi database was used for secondary data.

The life cycle stages included in this assessment follow the BIFMA PCR for Seating: UNCPC 3811 V3. Material acquisition and pre-processing (including transportation), production, distribution, use and end-of-life are assessed for the seating product.

#### Assessment boundary

The Life Cycle Assessment considers the full life cycle of the product as described here, cradle to grave. Life cycle stages included in this assessment follow the BIFMA PCR for Seating: UNCPC 3811 2020. Life cycle stages and phases are presented according to the PCR for seating.

		Stage	Status
	Cradle to inbound gate  MATERIALS ACQUISITION	A1. Raw material supply	<b>√</b>
<b>⊘</b> √	Raw material extraction and pre-processing.  Transportation up to the factory gate and internal transport.	A2. Transport	<b>√</b>
	Gate to gate PRODUCTION PROCESS External and internal manufacturing of products, ancillary materials, parts, packaging.	A3. Manufacturing	<b>√</b>
		A4. Transport	<b>√</b>
	Gate to grave  DISTRIBUTION, USE  AND END OF LIFE  Distribution of products, installation, use and end of life.	A5. Installation	<b>√</b>
		B1. Use	✓
刊口		B2. Maintenance/cleaning	<b>√</b>
		B3. Repair	<b>√</b>
		B4. Replacement	<b>√</b>
		B5. Refurbishment	✓
		B6. Operational energy use	✓
		B7. Operational water use	<b>√</b>
		C1. Disassembly	<b>√</b>
		C2. Transport	✓
		C3. Waste processing	<b>√</b>
		C4. Disposal	<b>√</b>
	Beyond the boundary	D. Reuse/recovery	

#### **AMERICAS RESULTS**

The product composition, packaging composition, recycled content, and recyclability visuals below relate specifically to the typical configuration of Series 1 consisting of 4D, height-adjustable arms, and plastic base produced in Reynosa, Mexico for the Americas. Product numbers represented by these results include: 435A00.

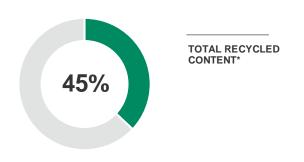

#### **Product composition**

Material	Weight (kg)	Weight (%)	Resource Type
Nylon (PA6 and PA66)	6.340	42.80%	Recycled, virgin non-renewable
Steel	4.691	31.67%	Recycled, virgin non-renewable
Polypropylene (PP)	2.091	14.12%	Recycled, virgin non-renewable
Aluminum	0.625	4.22%	Recycled, virgin non-renewable
Polyurethane (PU) foam	0.733	4.95%	Virgin non- renewable
Polyoxymethy- lene (POM)	0.189	1.27%	Recycled, virgin non-renewable
Other	0.143	0.96%	Virgin non- renewable
Total	14.811	100%	

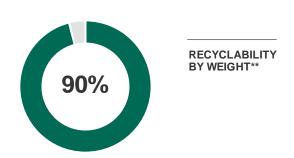

# Product packaging composition

Material	Weight (kg)	Weight (%)	Resource Type
Cardboard	4.084	89.58%	Renewable
Paper	0.009	0.20%	Renewable
HDPE	0.016	0.35%	Non-renewable
LDPE	0.450	9.87%	Non-renewable
Total	4.559	100%	

### Product recycled content\* and recyclability\*\* summary

\*\*Recyclability: this recyclability rate is the maximum amount of the product that is recyclable, based on the availability of recycling facilities in the specified regions and the ability of the product to be disassembled. Note that, per the requirements of the PCR, the end-of-life results presented in this EPD were calculated using the US EPA's recycling rates within the 2020 Municipal Solid Waste Report for parts that can be disassembled. Excluding packaging.

Results shown below are for the typical configuration of one Series 1 chair 435A00, produced in the Mexico for the Americas, consisting of standard pneumatic cylinder, upholstered seat, micro knit back, 4D height-adjustable arms and a plastic base.

#### Life cycle impact by category and stage

Environmental impacts were calculated using the GaBi software platform. Impact results according to the BIFMA PCR have been calculated using TRACI 2.1 characterization factors. LCI indicators for primary energy and water usage were obtained. Results presented in this report are for one seat maintained for one individual for 10 years. Additionally, the results are relative expressions and do not predict impacts on category endpoints, the exceeding of thresholds, safety margins, or risks.

	Life cycle stages					
	Unit	Materials acquisition	Production process	Distribution & Use	End of life	Totals
* Global warming potential (100years) Warming of the atmosphere caused by the global release of greenhouse gases.	kg CO2 eq	4.27E+01	1.77E+01	6.72E+00	3.63E+00	7.08E+01
*Acidification Emissions that increase the acidity of the environment due to various chemical reactions and/or biological activity, or by natural circumstances.	kg SO2 eq	1.50E-01	5.04E-02	4.14E-02	5.50E-03	2.48E-01
*Photochemical ozone creation (Smog) Through various chemical reactions, which occur between nitrogen oxides (NOx) and volatile organic compounds (VOCs) in sunlight.	kg O3 eq	2.00E+00	6.66E-01	8.57E-01	1.39E-01	3.67E+00
*Eutrophication Enrichment of an aquatic ecosystem with nutrients (nitrates, phosphates) that accelerate biological productivity and an undesirable accumulation of algal biomass.	kg N eq	8.81E-03	8.83E-03	2.06E+00	1.36E-03	2.07E+00
*Ozone depletion Reduction of the stratospheric ozone layer due to anthropogenic emissions of ozone depleting substances.	kg CFC-11 eq	7.16E-08	6.41E-11	6.41E-11	8.68E-13	7.17E-08
Primary energy demand Energy consumption at the source.	MJ	7.88E+02	4.36E+02	8.34E+01	8.87E+00	1.32E+03
Net freshwater usage Freshwater used and otherwise not recoverable.	kg	1.24E+03	1.19E+02	1.24E+01	1.00E+01	1.38E+03

\*Methods: TRACI 2.1

# Global warming potential summary

70.8 kg total CO₂-eq footprint

#### **ASIA PACIFIC CONFIGURATION RESULTS**

Results for the alternative configuration of one Series 1 chair, which is produced in APAC, consisting of 4D, height-adjustable arms, primarily metal base, headrest, adjustable lumbar support, and hard casters are shown below. The APAC configuration is manufactured in two locations in APAC and the composition shown is a weighted average by production volume at the two

locations. Compared to the typical configuration, the assessed APAC style includes accessories and uses aluminum for the base instead of plastic. Product numbers represented by these results include: 435A00.

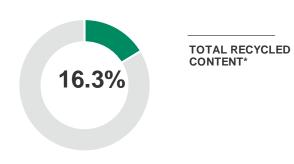

# **Product composition**

Material	Weight (kg)	Weight (%)	Resource Type
Steel	3.837	25.80%	Recycled, virgin non-renewable
Aluminum	2.686	18.10%	Recycled, virgin non-renewable
Polyoxymethy- lene (POM)	2.664	17.90%	Virgin non- renewable
Polypropylene (PP)	2.232	15.00%	Virgin non- renewable
Nylon (PA6 and PA66)	2.092	14.10%	Recycled, virgin non-renewable
Polyurethane (PU)	1.103	7.40%	Virgin non- renewable
Other	0.253	1.70%	
Total	14.866	100%	

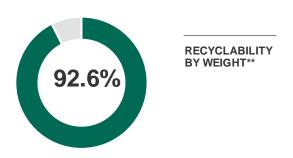

# Product packaging composition

Material	Weight (kg)	Weight (%)	Resource Type
Cardboard	3.000	83.26%	Renewable
Polyethylene (PE)	0.558	15.49%	Non-renewable
Paper	0.045	1.25%	Renewable
Total	3.603	100%	

## Product recycled content\* and recyclability\*\* summary

<sup>\*\*</sup>Recyclability: this recyclability rate is the maximum amount of the product that is recyclable, based on the availability of recycling facilities in the specified regions and the ability of the product to be disassembled. Note that, per the requirements of the PCR, the end-of-life results presented in this EPD were calculated using the US EPA's recycling rates within the 2020 Municipal Solid Waste Report for parts that can be disassembled.

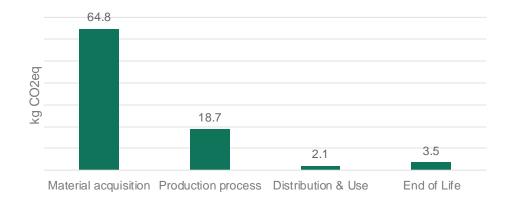

### Life cycle impact by category and stage

Environmental impacts were calculated using the GaBi software platform. Impact results according to the BIFMA PCR have been calculated using TRAC12.1 characterization factors, as well as LCI indicators for primary energy and water usage. Results presented in this report are for one seat maintained for one individual for 10 years. Additionally, the results are relative expressions and do not predict impacts on category endpoints, the exceeding of thresholds, safety margins, or risks.

	Unit	Life cycle stages				
		Materials acquisition	Production process	Distribution & Use	End of life	
* Global warming potential (100years) Warming of the atmosphere caused by the global release of greenhouse gases.	kg CO2 eq	6.48E+01	1.87E+01	2.07E+00	3.54E+00	8.91E+01
*Acidification Emissions that increase the acidity of the environment due to various chemical reactions and/or biological activity, or by natural circumstances.	kg SO2 eq	2.27E-01	6.89E-02	1.68E-02	3.82E-03	3.17E-01
*Photochemical ozone creation (Smog) Through various chemical reactions, which occur between nitrogen oxides (NOx) and volatile organic compounds (VOCs) in sunlight.	kg O3 eq	3.32E+00	9.30E-01	3.56E-01	8.44E-02	4.69E+00
*Eutrophication Enrichment of an aquatic ecosystem with nutrients (nitrates, phosphates) that accelerate biological productivity and an undesirable accumulation of algal biomass.	kg N eq	1.20E-02	7.99E-03	1.01E-03	1.17E-03	2.22E-02
*Ozone depletion Reduction of the stratospheric ozone layer due to anthropogenic emissions of ozone depleting substances.	kg CFC-11 eq	1.20E-07	5.61E-10	6.24E-15	2.14E-14	1.20E-07

\*Methods: TRACI 2.1

# Global warming potential summary

89.1 kg total CO<sub>2</sub> eq footprint

#### ADDITIONAL ENVIRONMENTAL INFORMATION

**Indoor air:** Steelcase seating products are certified with SCS's Indoor Advantage Gold ™ program, conforming to the ANSI/BIFMA Furniture Emissions Standard (M7.1/X7.1-2011 R2021) and CDPH/EHLB Standard Method (CA 01350) v1.2-2017 for seating. The certification can be found here.
