

Steelcase Series® 2

AMERICAS, APAC

About this product

Steelcase Series[®] 2 offers attainable performance with a boost of expression. The geometric back design comes in – standard or quilted upholstery, or plenty of 3D Microknit or Air back options.

One chair is required to meet the functional unit of seating one individual for a 10-year period.

Date of Issue: February 17, 2023 Date of Expiration: February 17, 2028

About this document

This declaration describes the Life Cycle Assessment of the Series 2 task chair produced for the Americas and APAC markets by Steelcase Inc. in Mexico and Malaysia. The assessment is performed according to the ISO standards 14040 (2006), 14044 (2006) and 14025 (2006), and BIFMA PCR for Seating: UNCPC 3811 (2020) to generate an EPD for business-to-business and business-to-consumer communication.

ASSESSMENT OVERVIEW

EPD commissioner	Steelcase® Inc
Corporate Address	901 44th Street SE Grand Rapids, Michigan 49508-7594 United States
Product group	Seating
Product name	Series 2
Product intended use	Office chair
Product reference service life	10 years
Reference standards	ISO 14025, ISO 14040, ISO 14044
EPD scope	Cradle to grave
EPD number	10811
Date of issuance	February 17, 2023
Date of expiration	February 17, 2028
EPD type	Product specific
EPD Product Coverage	Series 2 task chair/stool for the Americas and APAC markets, including the following codes: 436AIR3D, 436AIR, 436UPH, 436AIRSTOOL, 436AIR3DSTOOL, 436UPHSTOOL
Intended audience	Business to business and business to consumer
Year of reported manufacturer data	2021
Functional unit	One unit of seating to seat one individual for a reference service life of 10 years
Applicable markets/regions	Americas, APAC
LCA software and database version	GaBi 10.6.2.9; GaBi database, 2022.2
LCIA methodology and version number	TRACI 2.1 and CML 2001-October 2012
Program administrator	NSF Certification LLC 789 N. Dixboro, Ann Arbor, MI 48105 www.nsf.org
Reference PCR and version number	BIFMA PCR for Seating: UNCPC 3811 (BIFMA PCR, 2020)
PCR reviewer	Review Panel Chaired by Dr. Thomas Gloria
EPD reviewer	External review conducted by:
	Tony Favilla, afavilla@nsf.org This declaration and its Life Cycle Assessment was independently verified in accordance with ISO standards 14040 (2006), 14044 (2006) and 14025 (2006), and BIFMA PCR for Seating UNCPC 3811 (2020).
LCA reviewer	External review conducted by:
	Jack Geibig, jgeibig@ecoform.com Jack Julia The product Life Cycle Assessment was conducted in accordance with ISO 14044, and the reference PCR.
Disclaimer	The PCR this EPD was based on was written to determine the potential environmental impacts of a seating product from cradle to grave. It was not written to support comparative assertions. EPDs based on different PCRs, or different calculation models, may not be comparable. When attempting to compare EPDs or life cycle impacts of products from different companies, the user should be aware of the uncertainty in the final results, due to and not limited to, the practitioner's assumptions, the source of the data used in the study, and the specifics of the product modeled.

ASSESSMENT PARAMETERS

Functional unit

One unit of seating to seat one individual for a reference service life of 10 years. One product required to fulfill the functional unit.

Product scope

Reynosa, Mexico

One Series 2 stool (product number 436UPHSTOOL) with hard casters, 4D arms, upholstered back and seat, lumbar and headrest, foot adjustable ring, primarily metal base, weight-activated mechanics, and a sewn-stitched back was modeled for this EPD.

Results for configurations produced in Americas and APAC are presented on the subsequent pages and are considered to have the highest impacts of all configurations produced in their respective regions, making the results presented in the EPD a conservative estimate for all products listed.

<u>Manufacturing location</u> <u>Product SKUs within the variation allowance</u>

436AIR3D, 436AIR, 436UPH, 436AIRSTOOL,

 $436 {\sf AIR3DSTOOL},\, 436 {\sf UPHSTOOL}$

Kuala Lumpur, Malaysia 436AIR3D, 436UPH, 436AIR3DSTOOL,

436UPHSTOOL

Applicable markets and regions

Americas

APAC

Assessment goal and scope

The potential environmental impacts of Series 2 and its packaging throughout its entire life cycle – including raw materials extraction, production, transport, use, and end of life – were assessed. In the absence of primary information, the GaBi database was used for secondary data.

The life cycle stages included in this assessment follow the BIFMA PCR for Seating: UNCPC 3811 V3. Material acquisition and pre-processing (including transportation), production, distribution, use and end-of-life are assessed for the seating product.

Assessment boundary

The Life Cycle Assessment considers the full life cycle of the product as described here, cradle to grave. Life cycle stages included in this assessment follow the BIFMA PCR for Seating: UNCPC 3811 2020. Life cycle stages and phases are presented according to the PCR for seating.

		Stage	Status
$\widetilde{\leftarrow}$	Cradle to inbound gate MATERIALS ACQUISITION	A1. Raw material supply	√
⊙ √	Raw material extraction, pre-processing and transportation of materials to suppliers.	A2. Transport	√
7	Gate to gate PRODUCTION PROCESS Transportation of furniture components and materials from Tier 1 suppliers to Steelcase final manufacturing facility. External and internal production.	A3. Manufacturing	√

AMERICAS CONFIGURATION RESULTS

The product composition, packaging composition, recycled content, and recyclability visuals below relate specifically to the configurations consisting with the highest impacts made in the Americas region, including a stool, hard casters, 4D arms, upholstered back and seat, with lumbar and headrest, foot adjustable ring, primarily metal base, weight-activated mechanics, and sewn-stitched back.

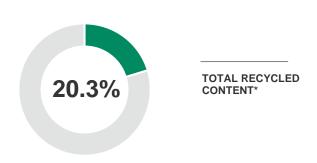

Product composition

Material	Weight (kg)	Weight (%)	Resource Type
Steel	8.867	38.90%	Recycled, Virgin non-renewable
Nylon (PA6)	4.966	21.80%	Recycled, Virgin non-renewable
Aluminum	3.436	15.10%	Recycled, Virgin non-renewable
Polypropylene (PP)	2.470	10.80%	Virgin non- renewable
Polyurethane (PU)	2.099	9.20%	Virgin non- renewable
Polyoxymethy- lene (POM)	0.266	1.20%	Virgin non- renewable
Other	0.688	3%	Virgin non- renewable
Total	22.792	100%	

Product packaging composition

Material	Weight (kg)	Weight (%)	Resource Type
Cardboard	4.233	70.69%	Renewable
Paper	1.112	18.58%	Renewable
Linear low- density polyethylene (LLDPE)	0.568	9.48%	Non-renewable
Fiberboard	0.073	1.21%	Renewable
Polyethylene (PE)	0.002	0.03%	Non-renewable
High-density polyethylene (HDPE)	0.000	0.01%	Non-renewable
Total	5.988	100%	

Product recycled content* and recyclability** summary

^{*}Total recycled content based on supplier's data. The source of recycled content of various materials could be either post-industrial or post-consumer based on market availability.

^{**}Recyclability: this recyclability rate is the maximum amount of the product that is recyclable, based on the availability of recycling facilities in the specified regions and the ability of the product to be disassembled. Note that, per the requirements of the PCR, the end-of-life results presented in this EPD were calculated using the US EPA's recycling rates within the 2020 Municipal Solid Waste Report for parts that can be disassembled.

Results for one Series 2 stool with hard casters, 4D arms, upholstered back and seat, lumbar and headrest, foot adjustable ring, primarily metal base, weight-activated mechanics, and a sewn-stitched back are shown below. As this configuration is considered the worst-case in the Americas region, these results represent the maximum impacts for Series 2 Chair produced in Americas. Product numbers represented by these results include: 436AIR3D, 436AIR, 436UPH, 436AIRSTOOL, 436AIR3DSTOOL, and 436UPHSTOOL.

Life cycle impact by category and stage

Environmental impacts were calculated using the GaBi software platform. Impact results according to the BIFMA PCR have been calculated using TRACI 2.1 characterization factors, as well as LCI indicators for primary energy and water usage. Results presented in this report are for one seat maintained for one individual for 10 years. Additionally, the results are relative expressions and do not predict impacts on category endpoints, the exceeding of thresholds, safety margins, or risks.

		Life cycle stages					
	Unit	Materials acquisition		oduction ocess	Distribution & Use	End of life	Totals
*Global warming potential (100 years) Warming of the atmosphere caused by the global release of greenhouse gases.	kg CO2 eq	1.08E+	-02	1.88E+0	1 8.79E+0	00 6.15E+00	1.41E+02
*Acidification Emissions that increase the acidity of the environment due to various chemical reactions and/or biological activity, or by natural circumstances.	kg SO2 eq	2.98E-	·01	1.11E-0	1 4.09E-0	02 8.54E-03	4.58E-01
*Photochemical ozone creation (Smog) Through various chemical reactions, which occur between nitrogen oxides (NOx) and volatile organic compounds (VOCs) in sunlight.	kg O3 eq	0.00E+	.00	0.00E+0	0 0.00E+0	00 0.00E+00	0.00E+00
*Eutrophication Enrichment of an aquatic ecosystem with nutrients (nitrates, phosphates) that accelerate biological productivity and an undesirable accumulation of algal biomass.	kg N eq	6.54E+	.00	2.61E+0	0 6.96E-0	01 3.99E-01	1.02E+01
*Ozone depletion Reduction of the stratospheric ozone layer due to anthropogenic emissions of ozone depleting substances.	kg CFC-11 eq	8.35E-	11	6.07E-1	0 1.66E-	14 3.71E-14	6.91E-10
Primary energy demand Energy consumption at the source.	MJ	1.97E+	03	6.54E+0	2 1.29E+0	02 1.87E+01	2.78E+03
Net freshwater usage Freshwater used and otherwise not recoverable.	kg	7.04E+	02	1.62E+0	2 1.73E+0	01 1.32E+01	8.97E+02
