Tu® Metal Mobile Pedestal

Americas

Environmental Product Declaration

Date of Issue: December 11, 2025

Date of Expiration: December 11, 2030

Product Category Rules

BIFMA PCR for Storage, UNCPC 3812, version 2

Product Sub-Category: Mobile Storage

EN 15804+A2

ISO 14025/14040/14044

Functional Unit

0.15 m^3 maintained for a 10-year period (2.78 Tu Metal Mobile Pedestal storage)

This EPD was not written to support comparative assertions. EPDs based on different PCRs or different calculation models may not be comparable. When attempting to compare EPDs or life cycle impacts of products from different companies, the user should be aware of the uncertainty in the final results due to and not limited to the practitioner's assumptions, the source of the data used in the study, the specifics of the product modeled, and the software tool used to conduct the study.

Environmental Product Declaration

Tu Metal Mobile Pedestal

Program Operator	NSF Certification LLC 789 N. Dixboro, Ann Arbor, MI 48105 www.nsf.org
Manufacturer Name and Address	MillerKnoll 855 East Main Ave. PO Box 302 Zeeland, MI 4964-0302 USA Sustainability@MillerKnoll.com
Declaration Number	EPD11210
Declared Product and Functional Unit	Tu Metal Mobile Pedestal (product code: LW110.20BFSRSS98KCNNHN) Functional Unit: 0.15 m^3 of storage capacity maintained for 10 years
Reference PCR and Version Number	BIFMA PCR for Storage, UNCPC 3812, version 2 EN 15804+A2
Product's intended Application and Use	Mobile Storage
Product RSL	10 years
Markets of Applicability	North/South America
Date of Issue	December 11, 2025
Period of Validity	5 years from date of issue
EPD Type	Product Specific
Intended Audience	Business-to-Business, Business-to-Consumer
Range of Dataset Variability	N/A
EPD Scope	Cradle to Grave
Year of reported manufacturer primary data	June 2023 – May 2024
LCA Software and Version Number	Sphera LCA for Experts (fka GaBi) 10.9
LCI Database and Version Number	Sphera Managed LCA Content (fka GaBi) Database, 2024.1
LCIA Methodology and Version Number	TRACI 2.1, IPCC AR6, EN 15804 EF 3.1
The PCR review was conducted by:	Review Panel Chaired by Dr. Thomas Gloria
This declaration was independently verified in accordance with ISO 14025: 2006, the BIFMA PCR for Storage, and EN 15804+A2 ☐ Internal ☒ External	Jack Geibig - EcoForm jgeibig@ecoform.com

This life cycle assessment was independently verified in accordance with ISO 14044 and the reference PCR by:	Jack Geibig - EcoForm jgeibig@ecoform.com
References	BIFMA PCR for Storage: UNCPC 3812, version 2 EN 15804+A2 (2019) ISO 14025/40/44 (2006) MillerKnoll Background Report for LCA/EPD Creation Tool v1.0

Limitations:

Environmental declarations from different programs (ISO 14025) may not be comparable. Comparison of the environmental performance of Products using EPD information shall be based on the product's use and impacts at the building level, and therefore EPDs may not be used for comparability purposes when not considering the building energy use phase as instructed under this PCR. Full conformance with the PCR for Products allows EPD comparability only when all stages of a life cycle have been considered. However, variations and deviations are possible". Example of variations: Different LCA software and background LCI datasets may lead to differences results for upstream or downstream of the life cycle stages declared.

Tu Metal Mobile Pedestal

Product Description

Tu Metal Storage accommodates the items that connect people to their work. The diverse set of options includes lateral files, pedestals, storage towers, storage cases, and bookcases, all designed with efficiency and personalization in mind. With a focus on giving people just what they need, this storage offers exceptional value at an affordable price.

This document relates to a Tu Metal Mobile Pedestal office storage. Tu Metal Mobile Pedestal box/file storage that is 21 3/8" high, 14 5/8" wide and 19 3/8" deep, with a in smooth painted steel surface, with ¾-extension roller slides on box drawer, full extension ball bearing on file drawer, with a keyed differently chrome lock and no hand grip is covered in this document.

Company Description

MillerKnoll is a collective of dynamic brands that comes together to design the world we live in. The MillerKnoll brand portfolio includes Herman Miller, Knoll, Colebrook Bosson Saunders, DatesWeiser, Design Within Reach, Edelman, Geiger, HAY, HOLLY HUNT, Knoll Textiles, Maharam, Muuto, NaughtOne, and Spinneybeck|FilzFelt. MillerKnoll is an unparalleled platform that redefines modern for the 21st century by building a more sustainable, equitable, and beautiful future for all.

Over the last century, Herman Miller has been guided by a commitment to problem-solving designs that inspire the best in people. Along the way, Herman Miller has forged critical relationships with the most visionary designers of the day, from mid-century greats like George Nelson, the Eames Office, and Isamu Noguchi, to research-oriented visionaries like Robert Propst and Bill Stumpf — and with today's groundbreaking studios like Industrial Facility and Studio 7.5. From the birth of ergonomic furniture to manufacturing some of the twentieth century's most iconic pieces, Herman Miller has pioneered original, timeless design that makes an enduring impact, while building a lasting legacy of design, innovation, and social good. Herman Miller is a part of MillerKnoll, a collective of dynamic brands that come together to design the world we live in. For more information, visit hermanmiller.com/about.

Our Mission

Driven by the mission to design and make the world's best products in the most sustainable way, MillerKnoll's sustainability strategy focuses on three key areas:

- **Carbon**
  Design the lowest carbon footprint products and commit to achieving net-zero carbon emissions by 2050[1].
- **Materials**
  Use sustainable, 100% bio-based or recycled materials by 2050.
- **Circularity**
  Design timeless, durable products with zero waste by 2050.

Supplier Support

At MillerKnoll, we are committed to working closely with our suppliers to reduce our collective impact on the environment. We encourage our suppliers to minimize their operations' environmental impacts and require they assist us in decreasing our facilities' environmental effects.

Manufacturing Location

- Holland, MI, United States

Warranty

Backed by MillerKnoll's lifetime warranty on Tu Storage products.

Creating Transparency on Materials

We are transparent about our materials because we believe in informed decisions. Our Ecomedes platform provides environmental product information from across our brands, including details about materials used and third-party certifications. This resource helps customers buy or specify environmentally preferable products by supplying product-level data and automating product performance calculations that can help contribute to sustainability goals. Ecomedes is linked here.

Product Environmental Data

	Value*
Recycled Content %	31%
Post-Consumer	6%
Pre-Consumer	25%
Recyclability (max %) **	97%

*The recycled content information shown may vary from ecomedes due to periodic product updates.

**This recyclability rate is the maximum amount of the product that is recyclable, based on availability of recycling facilities and ability of the product to be disassembled. Note that, per the requirements of the PCR, the End-of-Life results presented in this EPD were calculated using the US EPA's recycling rates within the 2018 Municipal Solid Waste Report for parts that can be disassembled.

Improper Disposal

MillerKnoll provides disassembly guidelines and encourages our end customers to either recycle or donate the products at the end-of-life. This can be accomplished through our dedicated takeback initiative (rePurpose) or by engaging with a nearby community recyclers. In situations where recycling isn't a viable option, we advise adhering to jurisdictional requirements for either incineration or landfill based on your local regulatory requirements.

Additional information, including installation and recycling instructions, can be found at https://www.hermanmiller.com/products/storage/tu-storage/.

[1] MillerKnoll's net-zero commitment is subject to factors that are partly outside its control, including its value chain's ability to reduce their Scope 1 and 2 emissions (and therefore MillerKnoll's Scope 3 emissions) by 2050. In light of this, MillerKnoll is committed to achieving net-zero by 2050 and will continue to engage with stakeholders across its value chain to support them in their efforts to become net-zero by 2050.

Tu Metal Mobile Pedestal

MATERIAL DECLARATION

Functional Unit

The functional unit is 0.15 m^3 of storage capacity, maintained over a 10-year period, including packaging materials used for the final assembled product. One product is 0.10 m^3 with a storage volume of 0.05 m^3. The product has met ANSI/BIFMA X5.9 requirements for a 10-year lifetime, so no replacements are required. To meet the functional unit, 2.78 units of Tu Metal Mobile Pedestal are required.

Reference Flow and Product Specifications

One Tu Metal Mobile Pedestal box-file storage (product code: LW110.20BFSRSS98KCNNHN) that is that is 21 3/8" high, 14 5/8" wide and 19 3/8" deep, with a in smooth painted steel surface, with ¾-extension roller slides on box drawer, full extension ball bearing on file drawer, with a keyed differently chrome lock and no hand grip was modeled for this EPD. This mobile storage is determined to be a representative product based on sales of the variations. The results in this EPD are only representative of this configuration. While the exact configuration purchased may be slightly different, it is expected to have impacts within 10% of this representative configuration. The results presented on the subsequent pages consist of the impacts of Tu Metal Mobile Pedestal made at Holland, MI, United States. The product composition table to the right is relevant for the product made in the manufacturing facility covered.

System Boundary

Cradle-to-Grave

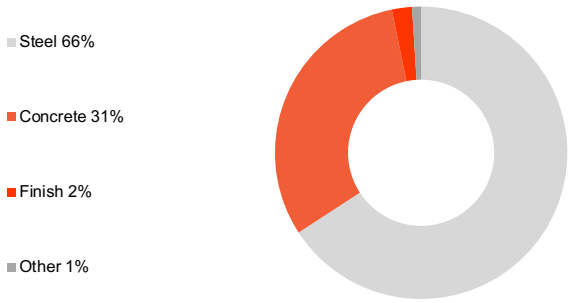
Content Declaration

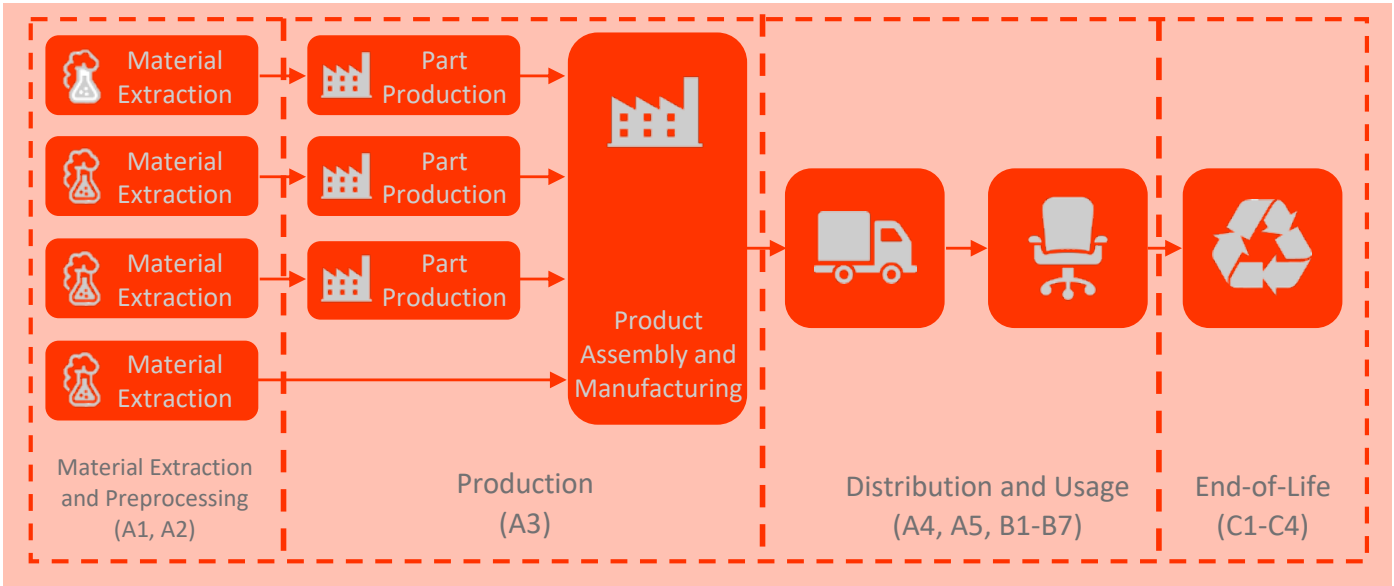
The table to the right details the materials included in a specific SKU for the product made in the United States, summarized in the chart below. In order to achieve the functional unit, 2.78 products are required.

Material	Mass (kg)	Mass (%)	Resource
Steel	17.77	66%	Virgin Non-renewable and Recycled Content
Concrete	8.36	31%	Virgin Non-renewable
Finish	0.60	2%	Virgin Non-renewable and Recycled Content
Other	0.27	1%	Virgin Non-renewable
Total	**27.00**	**100%**	

Packaging	Mass (kg)	Mass (%)	Resource
Corrugate	1.41	98%	Recycled Content
PE Foam	0.03	2%	Virgin Non-Renewable
PE Film	<0.01	<1%	Virgin Non-Renewable
Total	**1.44**	**100%**	

This product contains no substances prohibited by the regulations applicable at the time of EPD publication, and does not contain substances that require registration under REACH. It respects the restrictions on use of hazardous substances as defined in the REACH directive EC 1907/2006.





Overview of Life Cycle Stages

Tu Metal Mobile Pedestal

Life Cycle Impact Assessment – BIFMA PCR for Production in North America

Environmental Impacts were calculated using the GaBi software platform. Impact results according to the BIFMA PCR have been calculated using IPCC AR6 GWP_{100} and TRACI 2.1 characterization factors. Additionally, LCI indicators have been calculated for primary energy, water usage, renewable and non-renewable resources used as energy carriers and materials, and recovered energy. Results presented in this report are for 0.15 m^3 of storage capacity maintained for 10 years. To fulfill this functional unit, 2.78 units of product are required.

The results presented here are for Tu Metal Mobile Pedestal (product code: LW110.20BFSRSS98KCNNHN). Additionally, the results are relative expressions and do not predict impacts on category endpoints, the exceeding of thresholds, safety margins, or risks.

LCA Impact Category	Unit	Total	Raw Material Production	Product Production	Distribution and Retail	End of Life
Acidification Potential	kg SO_2 eq	4.26E-01	2.71E-01	8.14E-02	6.63E-02	7.22E-03
Eutrophication Potential	kg N eq	3.51E-02	1.71E-02	1.16E-02	5.91E-03	5.66E-04

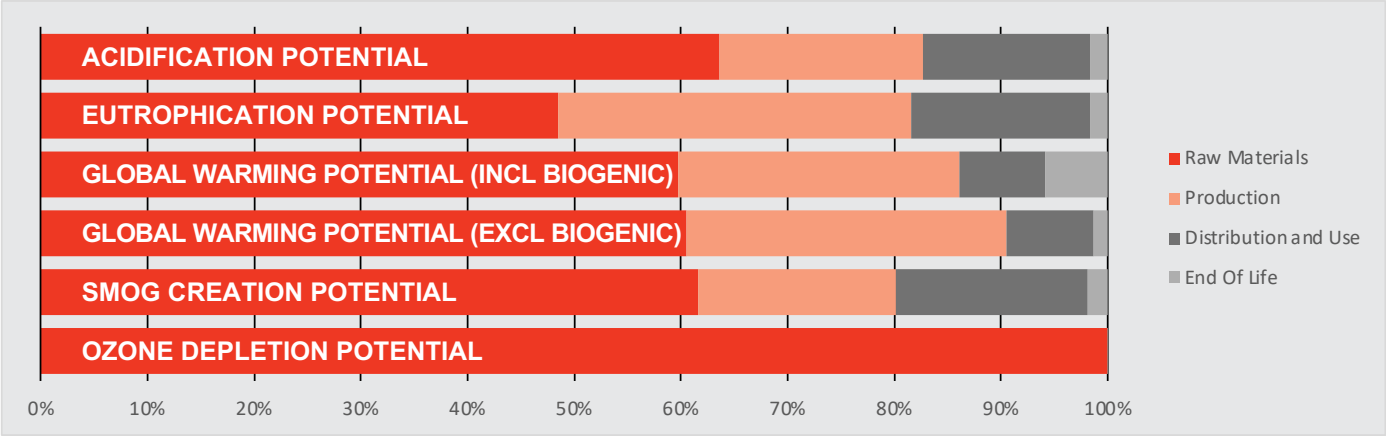
Life Cycle Impacts of Tu Metal Mobile Pedestal



MillerKnoll

Tu Metal Mobile Pedestal

APPENDIX: EN 15804+A2

Additionally, results have been calculated using LCIA methodologies for core environmental impact categories specified in EN 15804+A2, as well as LCI indicators required by EN15804+A2 reference package EF 3.1. The results are relative expressions and do not predict impacts on category endpoints, the exceeding of thresholds, safety margins, or risks. Values in the scenario tables below are reported per functional unit, which is 0.15 m^3 of storage capacity maintained for 10 years. To fulfill this functional unit, 2.78 units of product are required.

LCA Scenario Details

Functional Unit

Parameter	Value
Declared Unit	0.15 m^3
Reference Service Life Required	10 years
Biogenic Carbon in Product	0.0 kg C
Biogenic Carbon in Packaging	2.16 kg C

Reference Service Life

Parameter	Value per functional unit
Reference Service Life	10 Years
Design Application Parameters	Use as indicated in product brochure and warranty
Declared Product Properties	Properties given in product description on page 4
Indoor environment	Typical office and home environment
Use conditions	Typical office and home use

A4: Transport to the Building Site

Parameter	Value per functional unit
Transportation Type	Diesel Truck
Fuel Consumption	0.621 L/km
Distance	2,253 km
Capacity Utilization	61%
Capacity utilization volume factor	1
Weight of product (kg)	75.0
Volume (m^3)	0.28

A5: Installation in the Building

Parameter	Value per functional unit
Packaging Waste Produced	4.01 kg
Installation Assumptions	No product waste, Installed with hand tools.

B1: Use

Parameter	Value per functional unit
There are no emissions related to the expected use of this product.	

B2: Maintenance

Parameter	Value per functional unit
Maintenance Process	No maintenance is expected for this product
Maintenance cycle	0
Ancillary Materials for maintenance (kg/cycle)	0
Waste materials resulting from maintenance (kg)	0
Net fresh water consumption during maintenance (m3)	0
Energy input during maintenance (kWh)	0

B3: Repair

Parameter	Value per functional unit
Repair process	No repairs are expected for this product
Inspection process	No repairs are expected for this product
Repair cycle (#/RSL)	0
Ancillary materials (kg)	0
Waste materials from repair (kg)	0
Net freshwater consumption during repair (m3)	0
Energy input during repair (kWh)	0

B4: Replacements

Parameter	Value per functional unit
Replacement cycle (#/RSL)	0
Energy input during replacement (kWh)	0
Exchange of worn parts during the products life cycle (kg)	0

B5: Refurbishment

Parameter	Value per functional unit
Refurbishment process	No refurbishment is expected for this product
Refurbishment cycle (#/RSL)	0
Energy input during refurbishment (kWh)	0
Material input for refurbishment (kg)	0
Waste material resulting from refurbishment (kg)	0

B6 and B7: Use of energy and Use of Water

Parameter	Value per functional unit
Ancillary materials (kg)	0
Net freshwater consumption (m^3)	0
Characteristic performance	n/a

C1-C4: End-of-Life

Parameter	Value per functional unit
Weight of Product Collected (kg)	75.0
Weight to Recycling (kg)	5.15
Weight to Energy Recovery (kg)	13.97
Weight to Landfill (kg)	55.9
Distance to Recycling (km)	50
Distance to Energy Recovery (km)	100
Distance to Landfill (km)	50

D: Benefits and Loads Beyond the System Boundary

Parameter	Value per functional unit
Includes all flows leaving the system not allocated as co-products and have passed the end-of-waste state. Includes loads from processing recycled materials. Credits are calculated based on the amount of useable material and energy sent to the next product system. Credits not applied to the portion of flows derived from secondary sources.	

Tu Metal Mobile Pedestal

Life Cycle Stages

The results are provided according to the following life cycle modules:

Module	Description
A1	Product Stage: Raw Material Supply
A2	Product Stage: Transport
A3	Product Stage: Manufacturing
A4	Construction Process Stage: Transport
A5	Construction Process Stage: Installation
B1	Use Stage: Use
B2	Use Stage: Maintenance
B3	Use Stage: Repair
B4	Use Stage: Replacement
B5	Use Stage: Refurbishment
B6	Operational Energy Use
B7	Operational Water Use
C1	EOL: Deconstruction
C2	EOL: Transport
C3	EOL: Waste Processing
C4	EOL: Disposal
D	Benefits beyond system

Cut-off rules

All inputs in which data was available were included. Material and energy inputs greater than 1% (based on total mass and energy of the product system) were included within the scope of analysis. Material and energy inputs less than 1% were included if sufficient data was available to warrant inclusion and/or the material input was thought to have significant environmental impact. Cumulative excluded material and energy inputs and environmental impacts are less than 5% based on total weight of the functional unit. Some material inputs may have been excluded within the MLC datasets used for this project. All MLC datasets have been critically reviewed and conform to the exclusion requirements of the PCR. Some material inputs may have been excluded within the MLC datasets used for this project. All MLC datasets have been critically reviewed and conform to the exclusion requirements of the PCR.

Data Quality

The geographic coverage of primary data is considered very good. Overall geographic data quality of background data is considered good. Time coverage is considered good. Primary data provided by the manufacturer is specific to the technology that the company uses in manufacturing their product. It is site-specific and considered of good quality. Primary data was used for all manufacturing processes. Whenever available, supplier data was used for raw materials used in the production process. When primary data did not exist, secondary data for raw material production was used from the MLC database.

*The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator
**This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.
