NSF Nonfood Compounds
Registration Program

Company No: C0757554

Certificate of Registration

Fasinqi Quimica de Alta Performance has achieved Registration status for Solução Alcalinizante Caldeira FAS-311 A to the NSF International Registration Guidelines for Proprietary Substances and Nonfood Compounds (2022) .

Solução Alcalinizante Caldeira FAS-311 A

Category Code: G6

NSF Registration No. 167728

This product is acceptable for treating boilers or steam lines where steam produced may contact edible products and/or cooling systems where the treated water may not contact edible products in and around food processing areas (G6).

Food processing facilities are responsible for ensuring that they do not use chemical compounds in a manner that will result in the adulteration of food products. Therefore, it is not expected that the compounds would have to be decharacterized if an establishment document, as part of its HACCP plan, indicates that decharacterization is not needed. Such examples include if data are available to show that low levels of non-volatiles (such as sulfites) will not carry over into steam with the system, or, in the case of cooling water, a functional barrier separates the water from the meat food product.

Registration of this product is current when the NSF Registration Mark and Category Code appear on the product label reviewed by NSF, and the Registered product name is in the NSF White Book™ (www.nsfwhitebook.org).

Listing of all registered nonfood compounds by NSF International is not an endorsement of those compounds or of any performance or efficacy claims made by the manufacturer.
